# CDNs are going nowhere but up

## CDN Market Pricing Down, but Overall Growth Continues

At last week's Content Delivery Summit, Dan Rayburn presented his annual survey of pricing and trends in the industry. Per-GB prices are down, but CDNs are making up for the drop with increased efficiencies and value-added services

# CDNs are going nowhere but up

Akamai

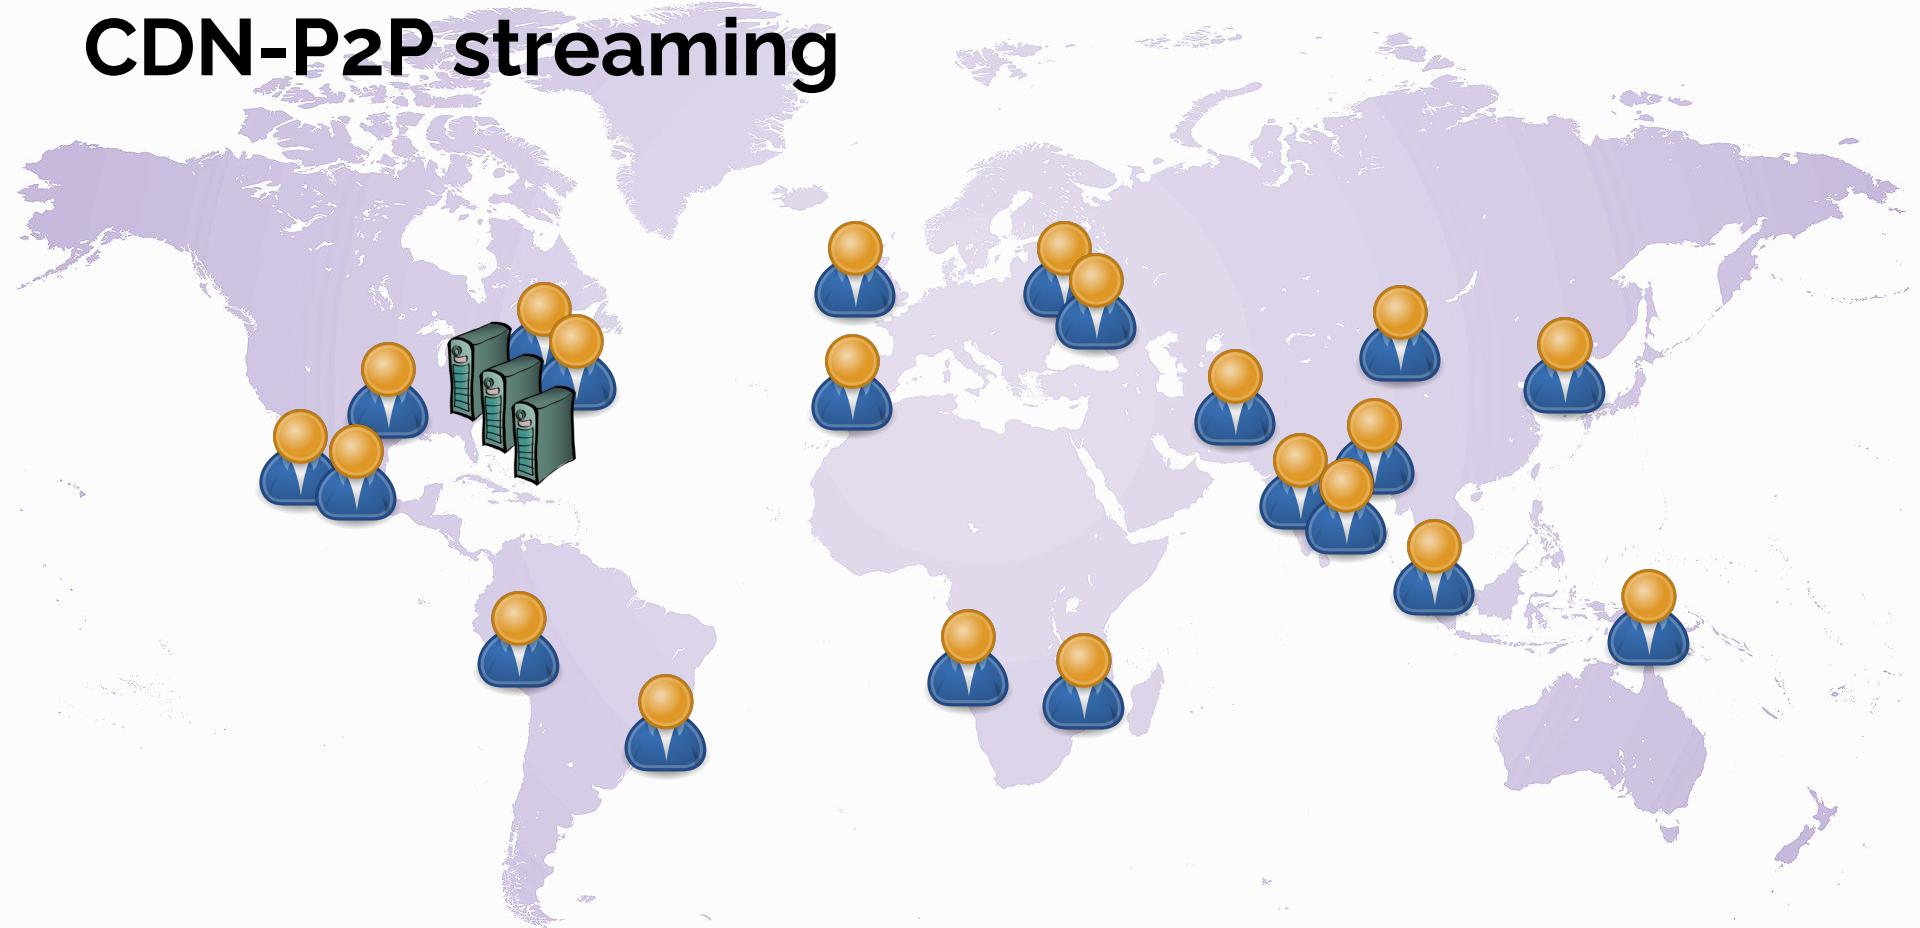

<b>Revenue</b>	▲ US\$ 2.3 billion (2016) <sup>[2]</sup>
	▲ US\$ 1.37 billion (2012) <sup>[2]</sup>
<b>Operating income</b>	▲ US\$ 414 million (2013) <sup>[2]</sup>
	▲ US\$ 314.5 million (2012) <sup>[2]</sup>
<b>Net income</b>	▲ US\$ 293.5 million (2013) <sup>[2]</sup>
	▲ US\$ 204 million (2012) <sup>[2]</sup>
<b>Total assets</b>	▲ US\$ 2.96 billion (2013) <sup>[3]</sup>
	▲ US\$ 2.6 billion (2012) <sup>[2]</sup>
<b>Total equity</b>	▲ US\$ 2.63 billion (2013) <sup>[3]</sup>
	▲ US\$ 2.35 billion (2012) <sup>[2]</sup>

## , but Overall Growth Continues

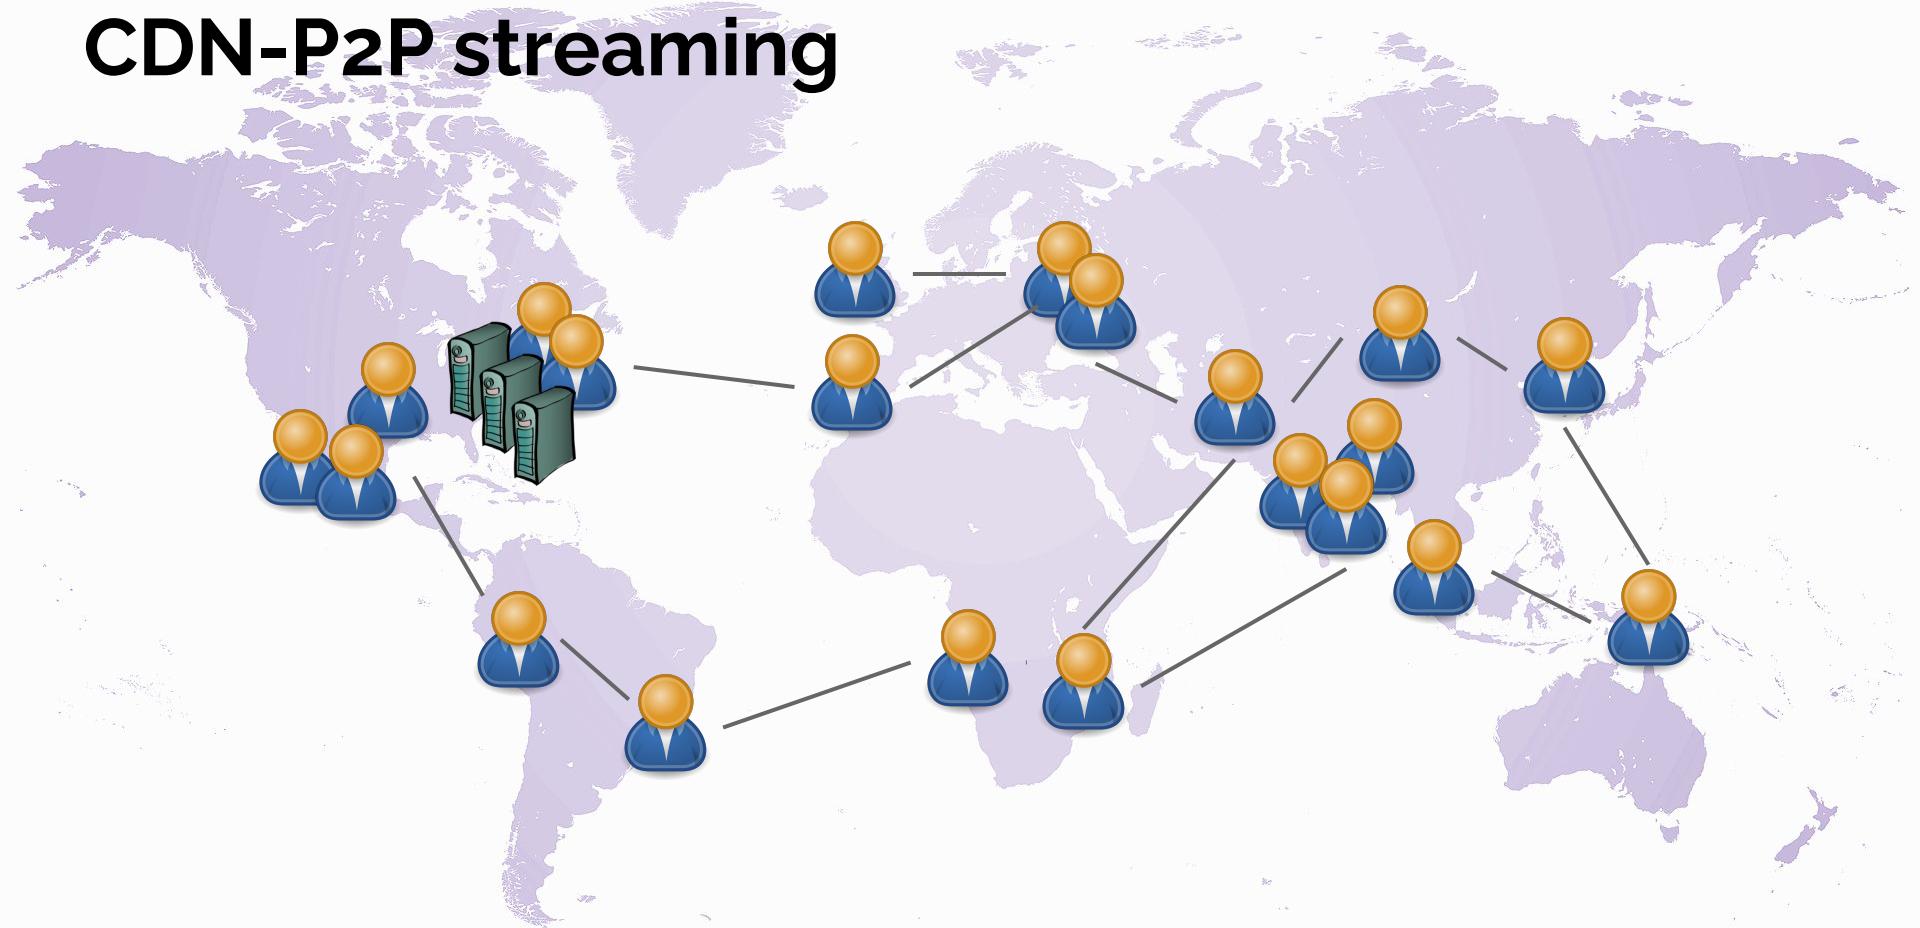

John Rayburn presented his annual survey of pricing. Rates are down, but CDNs are making up for the drop in demand by adding services

# CDN-P2P streaming challenge: Peer resource availability variability

# CDN-P2P with emergency requests

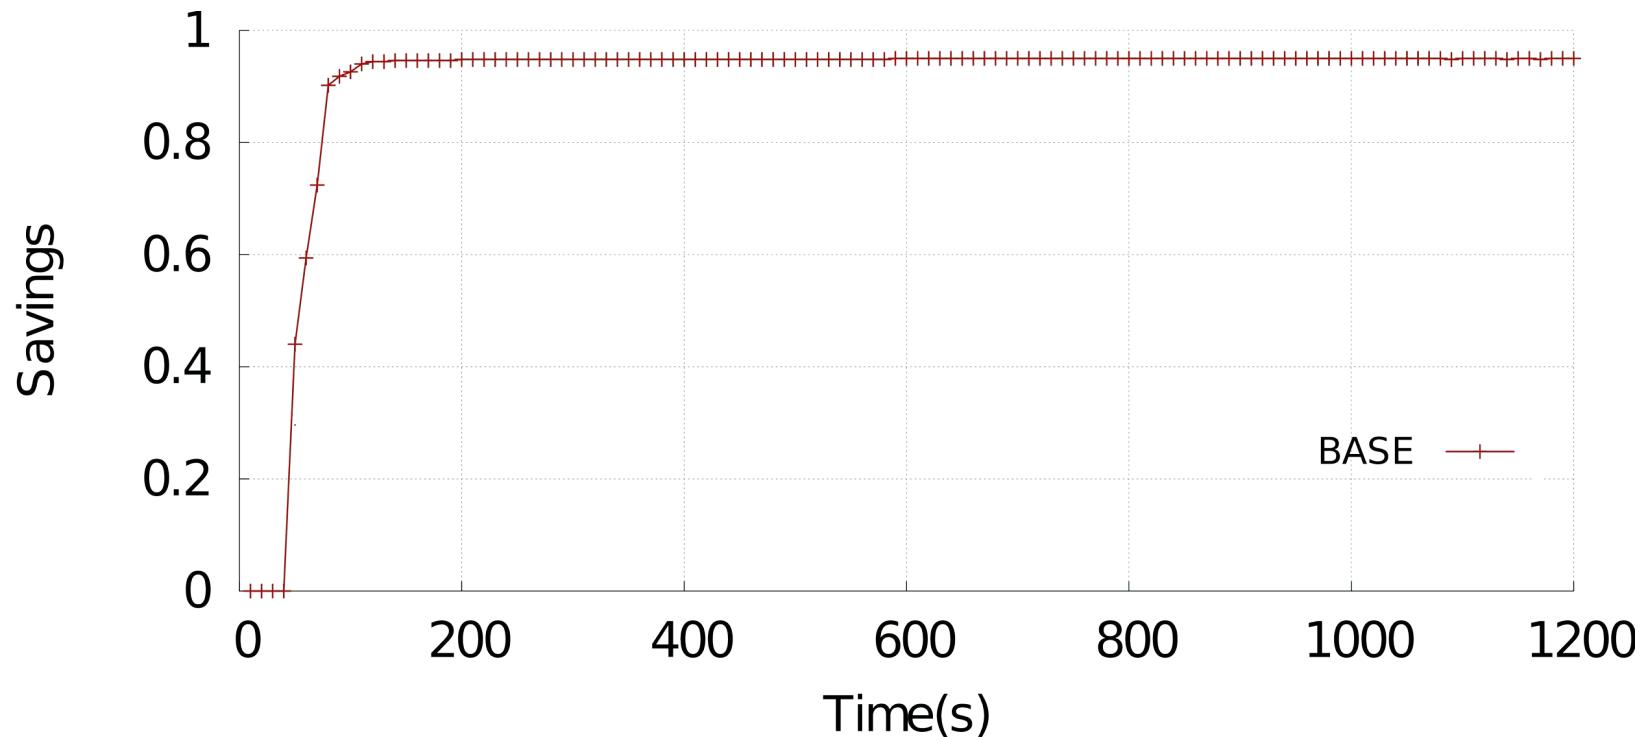

# Outline

- Simulation setup
- Impact of emergency request on P2P distribution
- AERO: Adaptive Emergency Request Optimization
- Evaluation

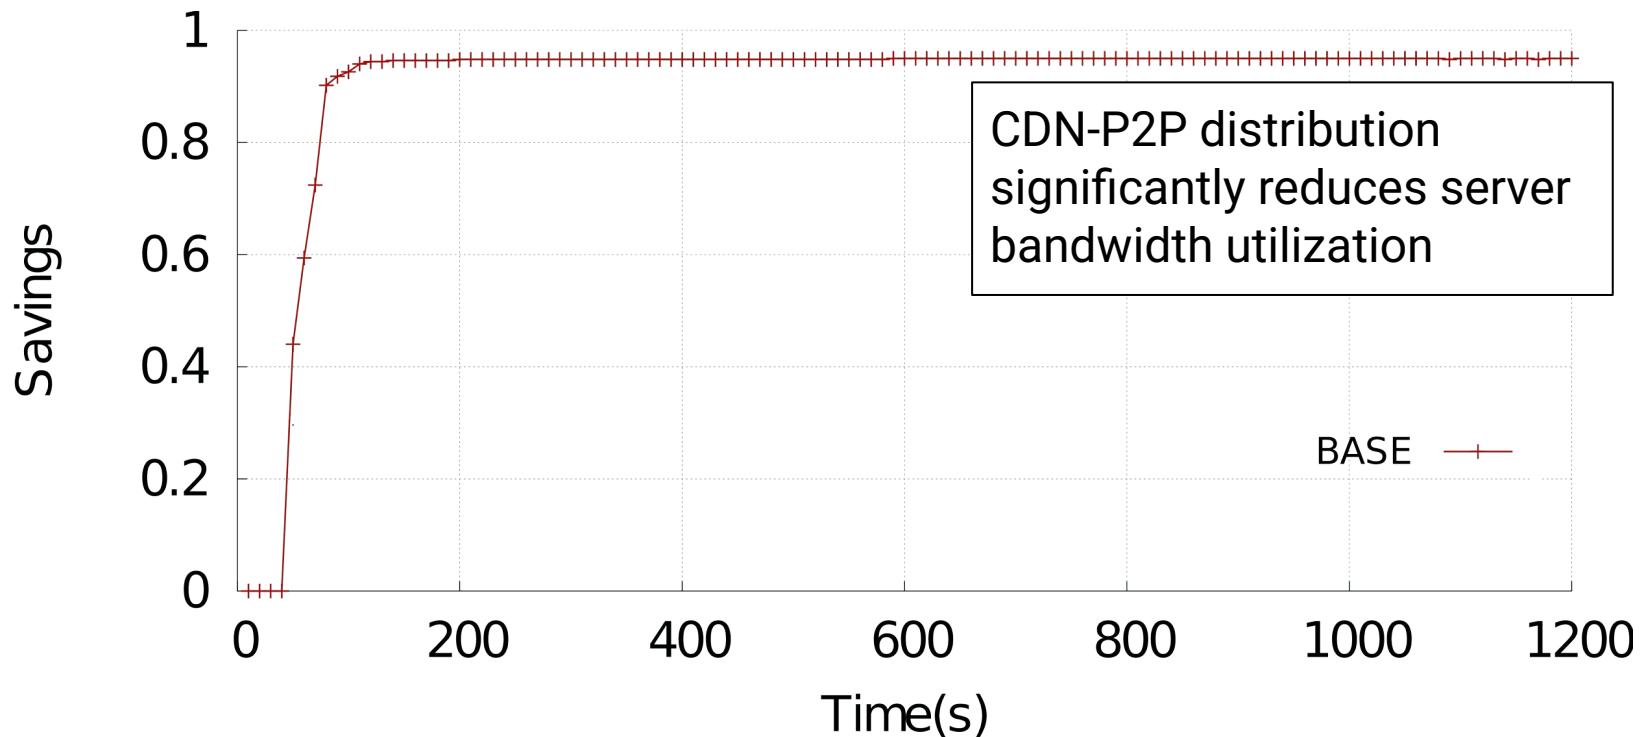

# Simulation configuration

- Run real system on top of a simulated network
- Underlay network
  - No congestion
  - End-to-end latency uniformly distributed between 10–50ms
- Streaming channels of varying client populations
  - 100–2000 clients
- Realistic peer upload distributions

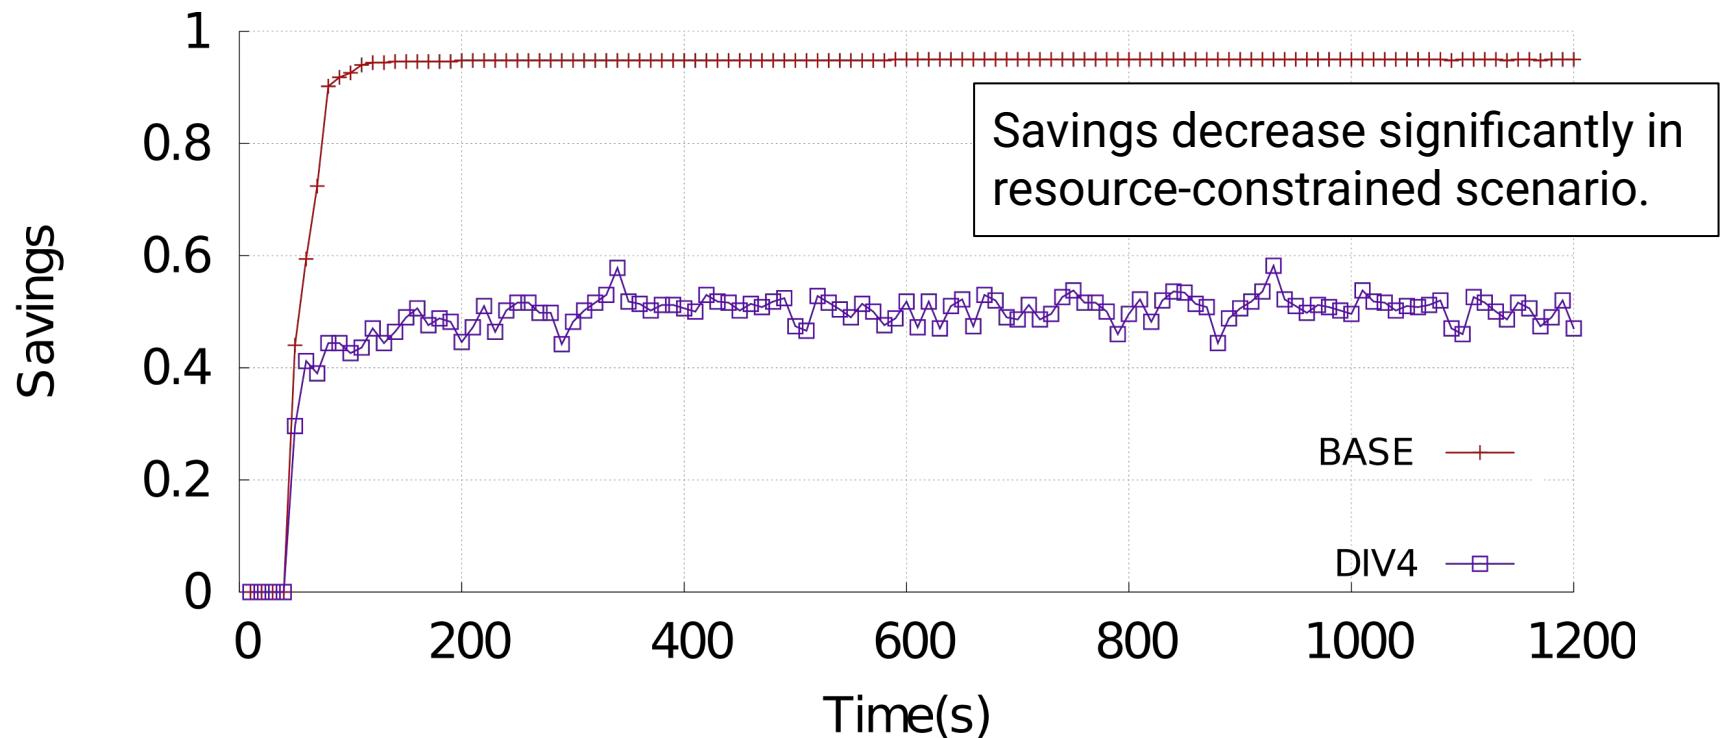

# CDN-P2P bandwidth savings

# CDN-P2P bandwidth savings

# CDN-P2P bandwidth savings

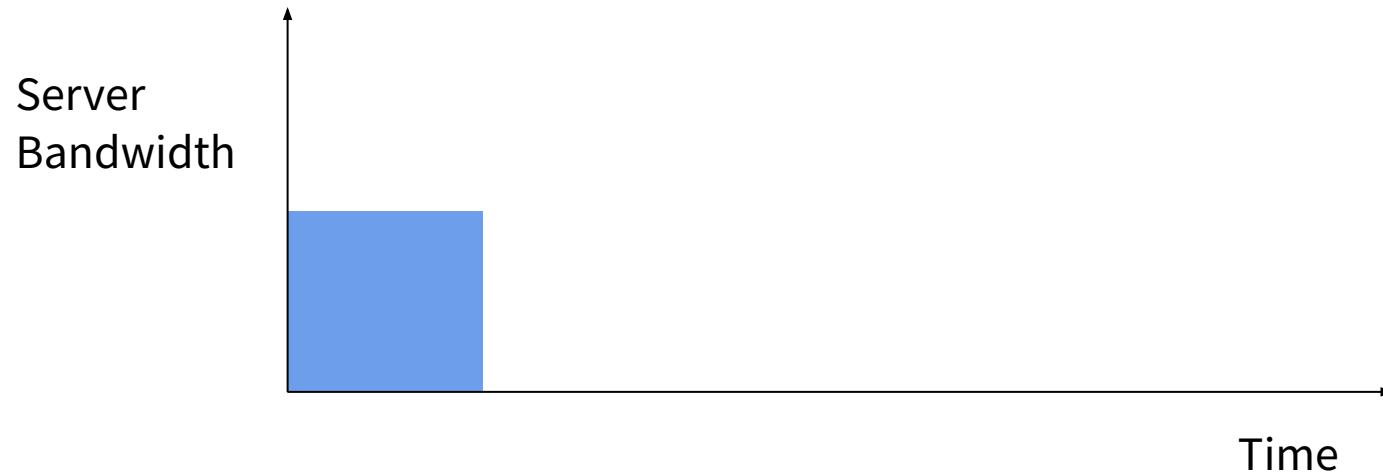

# Emergency requests hurt P2P efficiency

<b>Chunk Origin</b>	<b>Scenario</b>	
	Baseline	Constrained
Seeded by server	1.4%	0.7%
Emergency request	3.0%	49.5%
P2P overlay	95.6%	49.8%

# Emergency requests hurt P2P efficiency

Chunk Origin	Scenario		Average Retransmissions	
	Baseline	Constrained	Baseline	Constrained
Seeded by server	1.4%	0.7%	2.65	0.84
Emergency request	3.0%	49.5%	0.01	0.43
P2P overlay	95.6%	49.8%

# CDN-P2P bandwidth savings with AERO

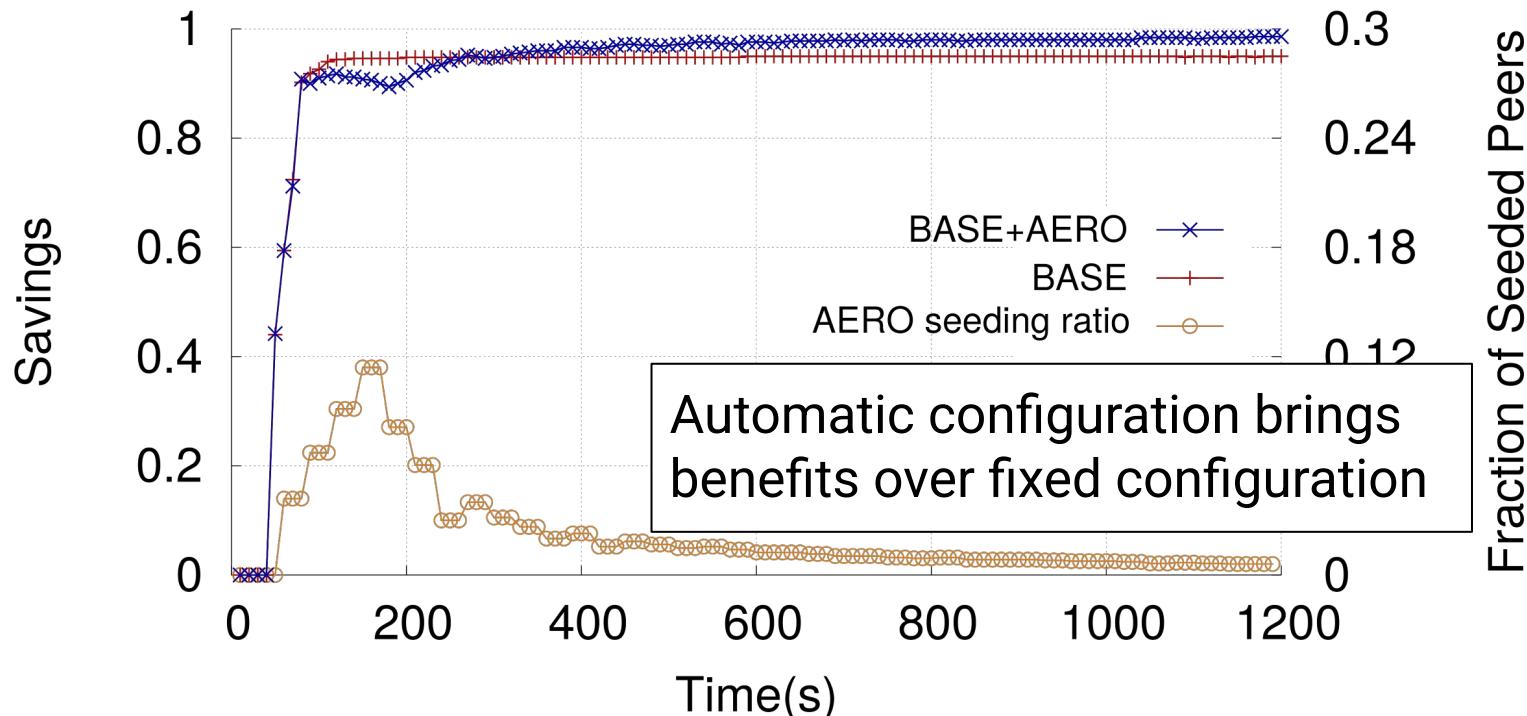

# CDN-P2P bandwidth savings with AERO

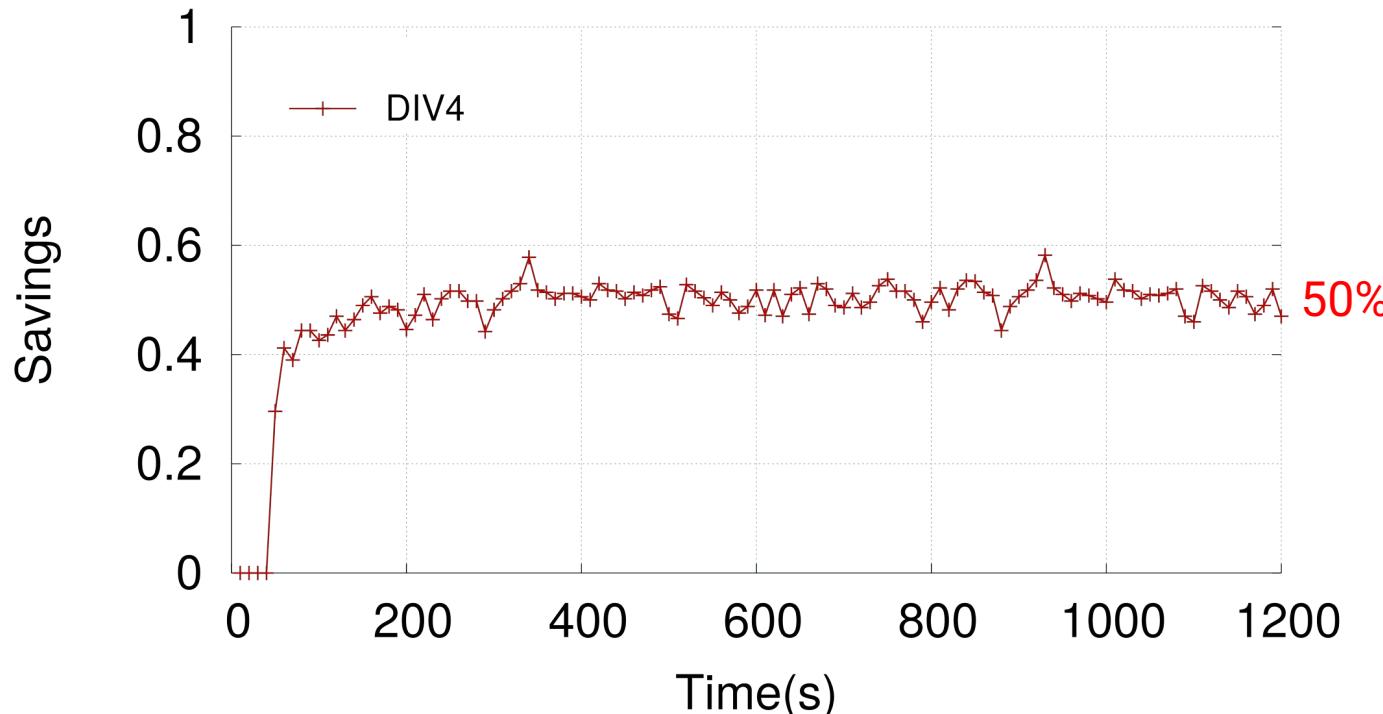

# CDN-P2P bandwidth savings with AERO

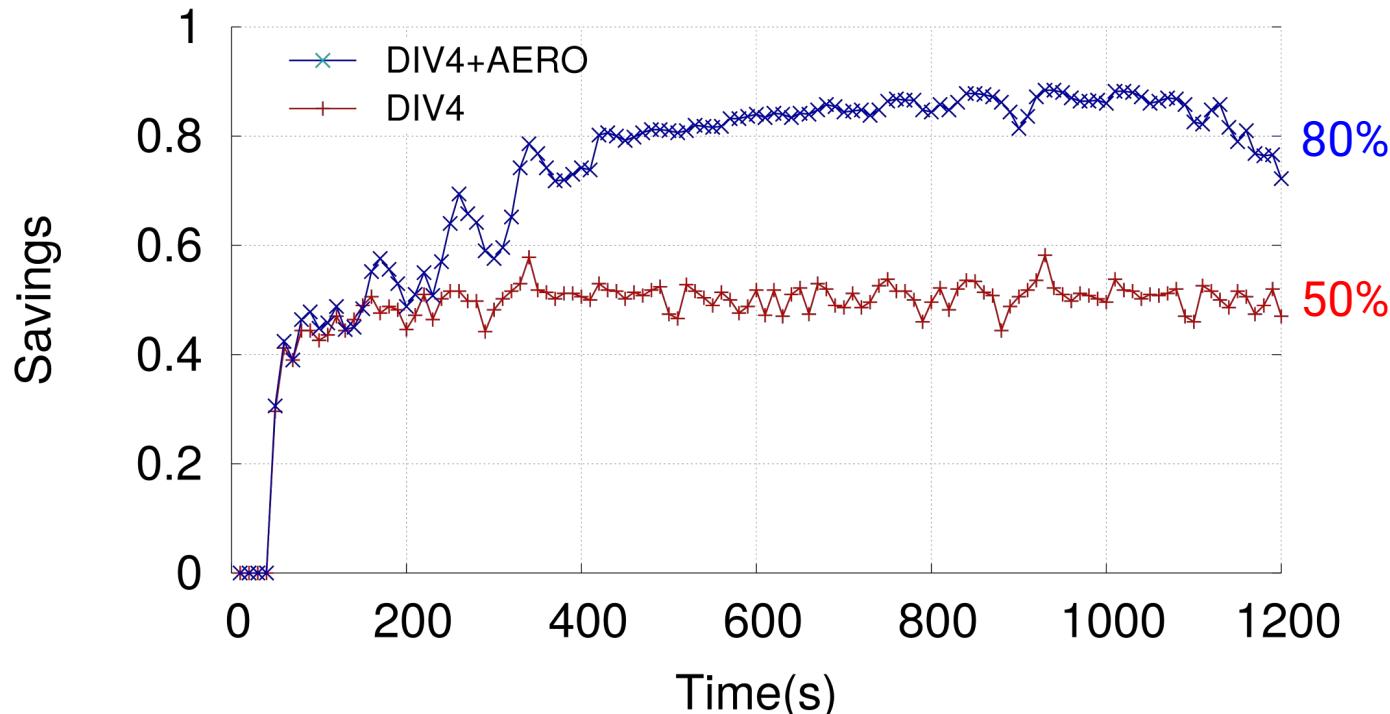

# CDN-P2P bandwidth savings with AERO

# AERO restores P2P distribution efficiency

Chunk Origin	Without AERO		With AERO	
	Baseline	Constrained	Baseline	Constrained
Seeded by server	1.4%	0.7%	1.6%	6.6%
Emergency request	3.0%	49.5%	0.9%	13.4%
P2P overlay	95.6%	49.8%	97.5%	80.8%

# Complementary results in the paper

- How AERO performs in face of peer churn
- How AERO performs in face of free riders
- How AERO performs during flash crowds

# Conclusions

- Emergency requests hurt P2P distribution efficiency
  - Leaves no time for chunks to be forwarded
- AERO adapts seeding ratio as function of the rate of emergency requests
  - Reduces seeding without compromising P2P distribution
- Significant bandwidth savings improvements
